Profile

Flutter developer shipping cross-platform apps for Android, desktop, and the web since mid-2025. Takes a feature end to end: interface and state in Dart, auth and relational data in Supabase, REST integration with FastAPI. Looking for a junior Flutter or mobile role on a remote or international team.

Selected projects

2025 – present
github.com/chadowsaln/flutter-installer

Flutter Installer
Flutter · Dart · desktop

- Desktop app for Linux, Windows, and macOS that installs and manages Flutter and Dart SDKs with **no backend, daemon, or external runtime** — the pipeline is pure Dart and system commands.
- Resolves release feeds and streams SDK archives over HttpClient with live progress, unpacks with tar/unzip, writes PATH per platform (shell export, or setx on Windows), and supervises child processes so removals leave nothing behind.

2026
github.com/chadowsaln/brew
live web build

Brew
Flutter · Supabase · web

- Coffee shop app covering both sides of the counter: menu browsing and ordering for customers, order handling for staff, in one codebase.
- Supabase provides sign-in, **role-based access**, and relational order data; the same build runs on Android and as a Flutter web deployment, with a two-language interface.

2025
APK demo

Drape
Flutter · ChangeNotifier · RTL

- Arabic-first right-to-left storefront: browsing, product detail, size and colour selection, cart, favourites, and checkout.
- Cart state in a **ChangeNotifier** that groups line items by product, size, and colour, deriving quantities and order totals from that grouping; runs on local mock data, with checkout stubbed until a backend is chosen.

2025
offline-first

StudyStash
Flutter · Supabase · SharedPreferences

- Pomodoro study app with gamified progress: tasks with priority, difficulty, and recurrence, plus streaks, badges, daily goals, and weekly productivity charts.
- Recovers in-flight sessions after an app restart and schedules local notifications; Arabic and English with RTL layout, light and dark themes, and offline-first device state.

Toolkit

Mobile & desktop	**Flutter**, **Dart**, Provider, ChangeNotifier, OOP, responsive and RTL layouts
Backend & data	**Supabase** (auth, roles, Postgres), **FastAPI**, REST APIs, SQL, PostgreSQL, MySQL
Languages & tools	Python, C++, Git, GitHub, Linux, Android Studio, VS Code

Experience

Jul 2025 – present
Mauritania

Independent software developer
self-directed

- Designed, built, and released four applications alone, from architecture and UI through packaging.

Education

2025 – present

Self-directed study
Flutter, Dart, backend, databases

Flutter and Dart, OOP, state management, API integration, Supabase and FastAPI, SQL, design patterns.

Safwa Institute
Mauritania

C++ and algorithms

Data structures and algorithmic problem solving in C++.
